

Property Reporting & Asset Management Technology Working Session

Dec 4, 2019

3:00 – 4:30pm AGENDA

Bradbury/Rose

HPN is looking to identify and leverage an asset management tool currently being used by a number of members in order to more seamlessly collect property data, lessening the reporting burden, and enabling us to more quickly aggregate the impact of our network. In addition, smaller members for whom asset management technology is cost prohibitive would be able to share HPN's buildout at a significantly reduced price. We are having discussions with MRI involving its Developer Central software, a leading asset management tool developed by Integratec, which is now part of MRI. This working session will seek your feedback on how the initiative would work. For those using Developer Central, we want to hear about your experience with it; for those using other similar software, we'd love to hear how it is working for you; and for those looking for a solution to replace Excel, we want to learn what's important to you.

- 3:00 Welcome and Introductions
- 3:15 Overview of Developer Central & the HPN Opportunity
- 3:45 Member Experience with Developer Central
- 4:00 Breakout Discussions
- 4:25 Wrap Up and Next Steps
- 4:30 Adjourn
